*Team Zero*

1

# Research Question

What is a suitable model to predict energy consumption and production of a “Zero At The Meter” dwelling, one day in advance with hourly resolution.

# Last week

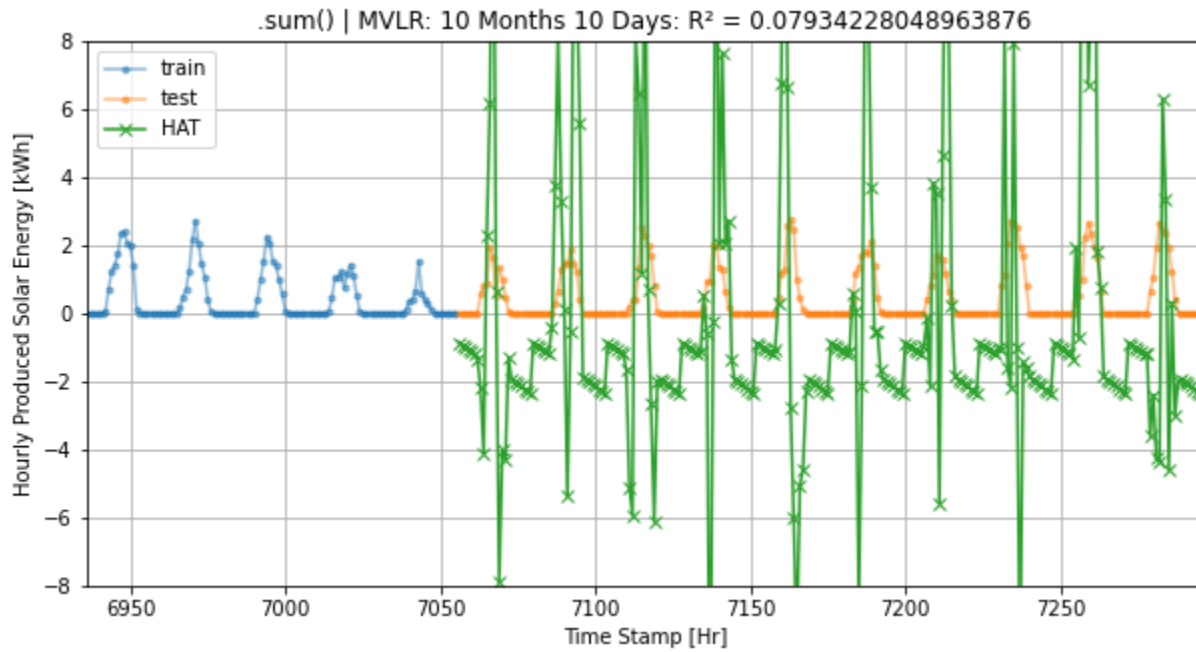

- Gap outliers handled
- Changed data preprocessing for the MVLR production model
- Pairplot for feature selection of consumption
- Consumption exploration
- Discussed about the team vision
- Datacamp: Introduction to Deep Learning with PyTorch

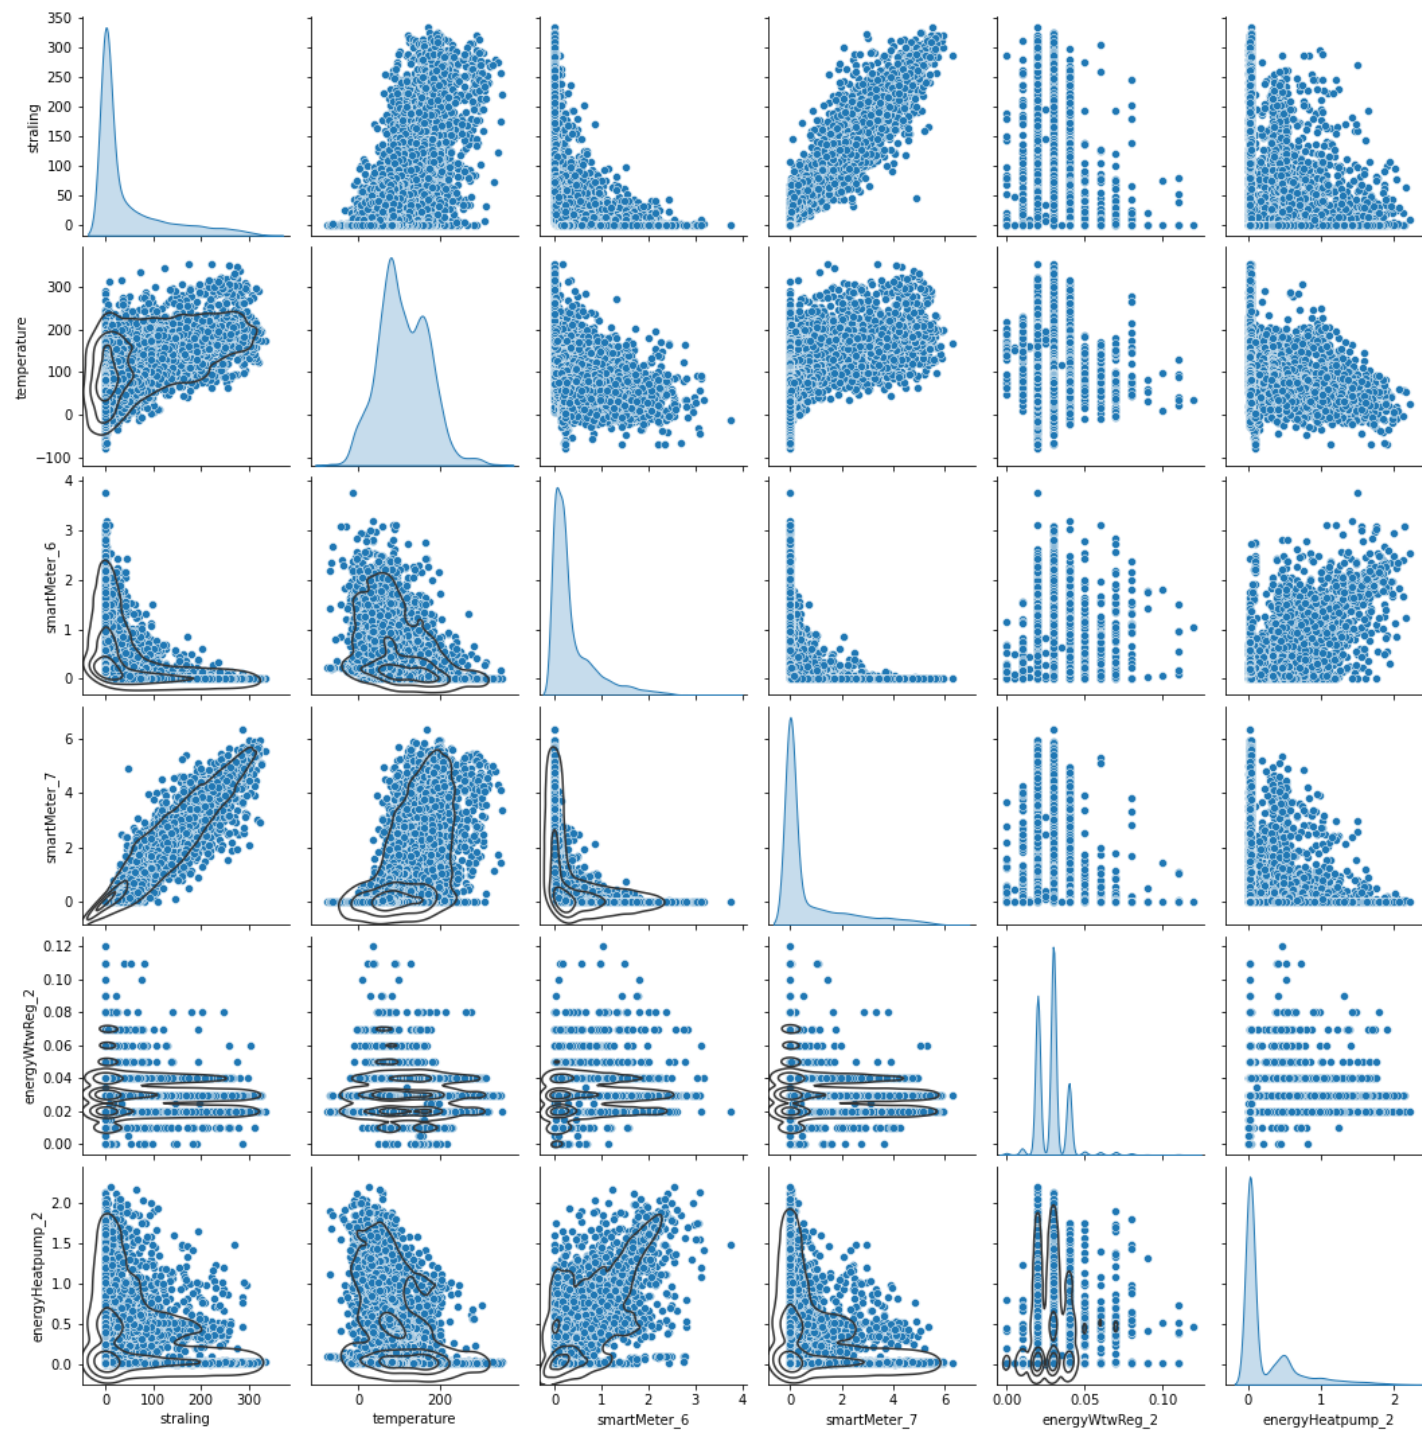

# Outliers

The `.mean()` is shifted down with an offset of 1, to clearly show both graphs and simultaneously show the similarities

# Different dataset MVLR

From .sum() to .mean() for the first resample  
method

# Pairplot Consumption

This will be improved next week

# Consumption

These are the first four houses, at the same moment in time.

# Reetro-Retrospective

(we used reetro.io for this process)

## Improvements week 9:

- Realistic sprint planning
- Less round Robin
- Team vision
- More visualizations to explain concepts

## Improvements Week 10:

- More brainstorm sessions
- Visualizations need to be clear
- Motivation took a dip
- Communication with Mentors

Went well week 10:

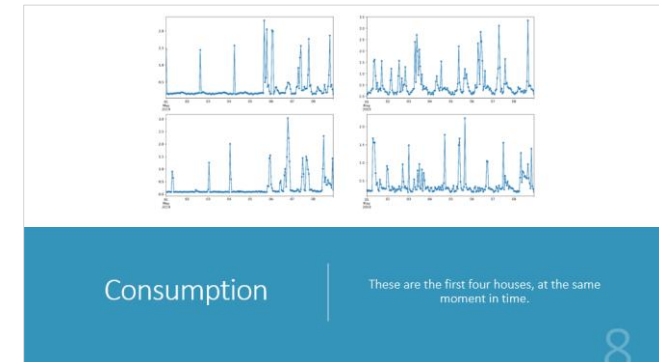

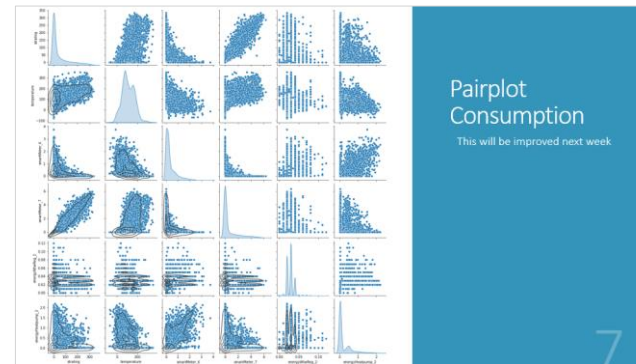

- Week 9 improvements
  - Communication with the team
  - Exams were taken into account
- Team members asked for help more when they got stuck

# This week

- Continue Consumption exploration
- Brainstorm about feature selection for Consumption
- Literature research (again) for LSTM
- Start with a Neural Network for consumption

# Remarks, Suggestions, Questions

### Reetro-Retrospective

(we used reetro.io for this process)

**Improvements week 9:**

- Realistic sprint planning
- Less round Robin
- Team vision
- More visualizations to explain concepts

**Improvements Week 10:**

- More brainstorm sessions
- Visualizations need to be clear
- Motivation took a dip
- Communication with Mentors

**Went well week 10:**

- Week 9 improvements
- Communication with the team
- Exams were taken into account
- Team members asked for help more when they got stuck
